TABLE OF CONTENTS

Preface	I
Contributors and Affiliations	III

SECTION 1

Environmental Management and Monitoring (Natural Environment)	1
1. Accuracy assessment of Ordinary Kriging and Inverse Distance Weighting based on estimation error for predicting naturally occurring radioactive materials	3
<i>B. Mtshawu, J. Bezuidenhout, and R.K. Botlholo</i>	
2. Mapping and determining land degradation using GIS and remote sensing: A case of General De La Rey Military Training Area	23
<i>N.V. Mathebula and R.R. le Roux</i>	
3. Temporal analysis of the effects of warfare on vegetation in Gaza	47
<i>T. Henrico, D. Naidoo, Z. Lourens, and Z. Münch</i>	
4. Investigating the distribution of sediments using natural radionuclides through in-situ measurements on the Kilindini Harbour, Mombasa, Kenya	67
<i>R.K. Botlholo, J. Bezuidenhout, and B. Mtshawu</i>	

SECTION 2

Urban Dynamics, Crime, and Security (Human-Environmental Interactions)	87
5. Spatio-temporal analysis for monitoring residential expansion: A case of Middelpoos settlement in Saldanha from 2004–2024	89
<i>N.L. Monyamane and L.P. Welman</i>	
6. Using hotspot analysis to geo-visualise criminal activity in the Saldanha Military Area: 2017–2023	101
<i>T.M. Tlhekwe and H.A.P. Smit</i>	
7. Evaluating crime patterns in South Africa: The imperative for enhanced police presence in Mamelodi East	119
<i>L.D. Pila and P. Schmitz</i>	
8. Evolving approaches to human security: Geographic insights into contemporary challenges	143
<i>A.R. Govender and I. Henrico</i>	

SECTION 3

Military, Maritime, and Security Infrastructure (Planning and Decision-making)	175
--	-----

9. Geospatial analysis of risk and consequences of an explosion incident at Koeberg nuclear power plant	177
<i>T.L. Molefe and D. Putter</i>	

10. Enhancing utility management through GIS and GPS integration: A case of the Saldanha Military Area	197
<i>S. Nyembe and I. Henrico</i>	

11. Maritime surveillance in Saint Helena Bay using a multisource approach	215
<i>J.M. Mametja and D. Putter</i>	

SECTION 4

Sustainable and Renewable Energy Solutions	231
--	-----

12. Photovoltaic solar farm site selection using the Analytical Hierarchy Process and Geographic Information Systems: A case in the Saldanha Military Area	233
<i>K.T. Kortman and S. Henrico</i>	

13. Modelling the maximum potential wave energy zones in North Bay, Saldanha, for small-scale green energy	257
<i>L.L. Matiwane and R.L. Uys</i>	

14. Geospatial tools and techniques in military exercise planning: Insights from the South African Military Academy's Exercise Trans Enduro	269
<i>M. Mathoho and H.A.P. Smit</i>	

About the Editors	287

PREFACE

This edited volume, *Student Perspectives in Military Geography and Geosciences: Navigating Environmental, Urban, and Security Challenges*, emerged from an innovative student-centred initiative that reflects a strong culture of academic mentorship and collaborative research within Stellenbosch University's Faculty of Military Science. Most of the chapters are based on postgraduate research conducted in the Department of Military Geography at the Saldanha Campus. Additional contributions originate from the Departments of Physics (Mil) and Nautical Science. One chapter (Chapter 3) reflects collaborative undergraduate research undertaken by students from the Department of Geography and Environmental Studies at the main campus of Stellenbosch University, while Chapter 8 represents an undergraduate research project developed within the Faculty of Military Science. Many of the student contributions were developed through mentorship and co-authorship with senior academics from these departments, as well as from the Department of Geography at the University of South Africa (UNISA), highlighting the cross-institutional collaboration that underpins this volume.

Each chapter originated from undergraduate coursework or honours-level research conducted under structured academic supervision. Through this process of academic guidance and refinement, these student-led projects evolved into publishable scholarly contributions. Many chapters were further developed following their presentation at the 15th International Conference on Military Geosciences (ICMG 2024), held in Somerset West, South Africa, from 9 to 14 June 2024. Participation in this international forum provided student researchers with an opportunity to engage with global scholars, present their findings, and further strengthen their academic work. Collectively, the chapters presented in this volume demonstrate rigorous research, critical analysis, and the practical application of geospatial methods within contemporary military and environmental contexts. At a time when geospatial technologies are increasingly central to understanding environmental change, urban dynamics, and security challenges, this volume highlights the important role that emerging scholars can play in advancing applied research within military geography and geosciences.

All chapters in this volume underwent a formal academic review process in accordance with the policies of African Sun Media. Academic reviewers were independently selected, including two national reviewers from outside the authors' institutions and one international reviewer. The peer review followed a double-blind process: manuscripts were sent anonymously to reviewers, and their feedback was returned anonymously to the authors. Based on the reviewers' recommendations, the authors revised their work to ensure academic rigour and overall quality.

The book is thematically organised into four key sections, reflecting the diverse areas of focus within this interdisciplinary field.

The first section, *Environmental Management and Monitoring (Natural Environment)*, explores advanced geospatial methods for analysing environmental processes and risks. Chapters in this section include the assessment of radionuclide distribution in sediments (Chapters 1 and 4), the evaluation of land degradation in military training areas (Chapter 2), and the analysis of vegetation changes in conflict-affected regions (Chapter 3).

The second section, *Urban Dynamics, Crime, and Security (Human–Environmental Interactions)*, examines the spatial dimensions of urban development and security challenges. The chapters in this section explore residential expansion in informal settlements (Chapter 5), spatially targeted crime analysis in military and civilian contexts (Chapters 6 and 7), and the application of geospatial technologies to enhance human security strategies in the face of climate change, migration, and conflict (Chapter 8).

The third section, *Military, Maritime, and Security Infrastructure (Planning and Decision-Making)*, focuses on the strategic application of geospatial intelligence in infrastructure management and surveillance. Chapters 9, 10, and 11 provide insights into nuclear facility risk assessment (Chapter 9), utility infrastructure management in military contexts (Chapter 10), and maritime surveillance to detect illegal activities (Chapter 11).

The final section, *Sustainable and Renewable Energy Solutions*, addresses the growing importance of energy security and operational sustainability in defence contexts. Chapters 12, 13, and 14 examine photovoltaic solar farm site selection (Chapter 12), wave energy potential in coastal environments (Chapter 13), and the use of geospatial tools to support efficient military exercise planning (Chapter 14).

This volume showcases the academic capabilities of student researchers while highlighting the value of structured academic mentorship. By transforming coursework and honours research into peer-reviewed scholarly outputs, the contributors demonstrate how student-led research can meaningfully contribute to advancing knowledge in military geography and geosciences.

We commend the student authors and their academic mentors for their dedication, innovation, and scholarly commitment. We hope that this volume will encourage continued research, collaboration, and intellectual curiosity within the evolving fields of military geography and geosciences.

EDITORS:

Ivan Henrico, Susan Henrico, and Rikus le Roux

CONTRIBUTORS AND AFFILIATIONS

Chapter	Student author(s)	Mentor / co-author(s)	Institutional affiliation(s) of mentors / co-authors
1	R.K. Botlholo	Prof. J. Bezuidenhout and Dr. B. Mtshawu	Department of Physics (Mil) & Military Geography, Faculty of Military Science, Stellenbosch University
2	N.V. Mathebula	Assoc. Prof. R.R. le Roux	Department of Military Technology, Faculty of Military Science, Stellenbosch University
3	T. Henrico, D. Naidoo, Z. Lourens	Dr. Z. Münch	Department of Geography and Environmental Studies, Stellenbosch University
4	R.K. Botlholo	Prof. J. Bezuidenhout and Dr. B. Mtshawu	Department of Physics (Mil) & Military Geography, Faculty of Military Science, Stellenbosch University
5	N.L. Monyamane	Dr. L.P. Welman	Department of Military Geography, Faculty of Military Science, Stellenbosch University
6	T.M. Tlhekwe	Prof. H.A.P. Smit	Department of Geography, University of South Africa
7	L.D. Pila	Prof. P. Schmitz	Department of Geography, University of South Africa
8	A.R. Govender	Assoc. Prof. I. Henrico	Department of Military Geography, Faculty of Military Science, Stellenbosch University

9	T.L. Molefe	Dr. D. Putter	Department of Defence Intelligence Studies, Faculty of Military Science, Stellenbosch University
10	S. Nyembe	Assoc. Prof. I. Henrico	Department of Military Geography, Faculty of Military Science, Stellenbosch University
11	J.M. Mametja	Dr. D. Putter	Department of Defence Intelligence Studies, Faculty of Military Science, Stellenbosch University
12	K.T. Kortman	Dr. S. Henrico	Department of Defence Intelligence Studies, Faculty of Military Science, Stellenbosch University
13	L.L. Matiwane	Mr. R.L. Uys	Department of Nautical Science, Faculty of Military Science, Stellenbosch University
14	M. Mathoho	Prof. H.A.P. Smit	Department of Geography, University of South Africa
